Mathematical Biosciences

Mathematical Biosciences is abstracted or indexed in Applied Mechanics Review, Biological Abstracts, CABS/ Current Awareness in Biological Sciences, Chemical Abstracts, Current Contents, Engineering Index, Excerpta Medica, INSPEC, International Abstracts of Biological Sciences, Mathematical Reviews, and Medicus/ MEDLINE.

Volume 170

F. Kozusko, P.-H. Chen, S.G. Grant, B.W. Day and J.C. Panetta, A mathematical model of in vitro cancer cell growth and treatment with the antimitotic agent curacin A 1

T. Yoshigaki, Simulation of the mechanism of determining the position of the cleavage furrow in cytokinesis of sea urchin eggs 17

M.D. Radmacher and T.B. Kepler, Waiting times to appearance and dominance of advantageous mutants: estimation based on the likelihood 59

T. Aittokallio, M. Gyllenberg and O. Polo, A model of a snorer's upper airway 79

M. Steel and A. McKenzie, Properties of phylogenetic trees generated by Yule-type speciation models 91

D. Clancy and N.P. French, A stochastic model for disease transmission in a managed herd, motivated by *Neospora caninum* amongst dairy cattle 113

K.A. Lindsay, J.M. Ogden and J.R. Rosenberg, Equivalence transformations for dendritic Y-junctions: a new definition of dendritic sub-unit 133

S. Coombes, From periodic travelling waves to travelling fronts in the spike–diffuse–spike model of dendritic waves 155

X. Song and L. Chen, Optimal harvesting and stability for a two-species competitive system with stage structure 173

A. Kamina, R.W. Makuch and H. Zhao, A stochastic modeling of early HIV-1 population dynamics 187

M. Fan, M.Y. Li and K. Wang, Global stability of an SEIS epidemic model with recruitment and a varying total population size 199
